

Title: NoStudentsLeftBehind: The Role of Digital Inclusion in the Academic Performance of Senior High School Students Amid the Pandemic

ABSTRACT:

When the COVID-19 pandemic started, students had to study at home. This showed that some students have computers and internet, while others do not. This research checked if having a gadget and internet affects the grades of Senior High School students in Metro Manila. The researchers gave an online survey to 203 students in Grades 11 and 12. They used math and statistics to check the answers. The results showed that having good internet and a personal gadget helps students get higher grades. Students who shared gadgets or had slow internet got lower grades. The study says that giving students equal access to technology is very important for fair learning.

1. Who is/ are the researchers?

The researchers are Senior High School students from De La Salle University (DLSU).

2. What is the research all about?

It is about how having a personal gadget and fast internet affects the grades of high school students during the pandemic.

3. What are the research problems (statement of the problem) to be answered?

The main problem is to find out if there is a connection between a student's access to technology (like internet and cellphones) and their school grades.

4. Who are the participant or respondents?

The respondents are 203 Senior High School students (Grade 11 and 12) living in Metro Manila.

5. What statistical treatment did the researcher use?

The researchers used Descriptive Statistics and Pearson Correlation to count and compare the survey answers.

6. What are the findings of the study?

The study found out that students with their own gadgets and good internet got higher grades. Students who only borrowed gadgets or had bad internet had lower grades.
